

Main Design

Zoho Recruit

DialogFlow Agent

Some Important Points

- We will only be using one Google Sheets for all this. It is, right now, called HirBot Storage
- The time decided when the person will be called is random. We can manually change the time when you manually go to Calendar and change it.
- The process in general is:
 - Zoho record created → Saved in Sheets → Candidate called
- I haven't added the skype integration part considering that we will use jio/airtel if possible
